

EDMUND'S NATIVE PLANT NURSERY BURTON'S OAK GROVE NURSERY

2190 OAK GROVE ROAD • WALNUT CREEK

Phone: 935-7420

RETAIL

An effort is made to maintain a stock of the 239 species of California shrubs and trees covered by this list. The limited stock of some of the species is sometimes exhausted. As propagating material is secured, other species are from time to time available. Inquiries may be made for desired species which do not appear on the list.

PRICE: The retail price for gallon stock material is shown. Prices are f.o.b. Walnut Creek, California. Prices are subject to change without notice. Where large quantities are ordered we will quote special prices on request.

TERMS: Cash with order except with customers having established charge accounts. No C.O.D. orders, please.

SALES TAX: Customers residing in California will please add 4% to cover sales tax.

PACKING: On orders to go by freight or express please add 20% to cover cost of packing. Plants shipped by freight or express are forwarded at purchaser's expense and risk. Minimum order \$10.00.

GUARANTEE: We guarantee all plants to be true to name and in good condition when shipped. We assume no liability greater than the purchase price and claims must be made within ten days after arrival. We make no warranty as to growth or behavior of the plants after delivery, as conditions are beyond our control.

In preparing this list an attempt has been made to show the mature height and spread of shrubs and the mature height of trees. In the case of trees it should be understood the height is for adult specimens and that, except for some of the rapid growing species, these heights will be reached only after many years.

The Nursery specializes in the drought resistant shrubs and trees of California. With but a few exceptions the plants listed will require little or no summer water after they are established. During the first summer after planting some watering is desirable. The frequency of watering will depend on the time of planting, the location, type of soil and seasonal conditions. Where planting has been done during the fall or winter months a deep watering once a month during the first summer will usually be sufficient. The first watering may be given during June.

Even though drought tolerant, many of the species will tolerate some water after they are established. Some will thrive under garden conditions. Species of *Fremontia*, and most species of *Arctostaphylos* and *Ceanothus*, not only require sharp drainage, but should be given little or no summer water after the first year. Coastal species of *Arctostaphylos* and *Ceanothus* seem to be more water tolerant than those which come from the dry interior. Where these are used in the hot, dry interior occasional summer watering may be desirable, especially where they are in full sun throughout the day.

It is highly important, in planting, that the root crown be placed at the natural contour. Where used on a level site, especially with *Fremontia*, *Ceanothus* and *Arctostaphylos*, it is an excellent idea to raise the contour a few inches. Stem rot is apt to occur where soil is allowed to build up around the stems. While some of the plants may tolerate fertilizers, the use of these is not recommended. It is believed that better plants are secured where they must send their roots far in search of nutrients. Cultural advice will, upon request, be given to the best of our experience.

For those who are unfamiliar with California Native Plants, the following references are cited:

An Illustrated Manual of California Shrubs by Howard E. McMinn.

Ceanothus by Maunsell Van Rensselaer & Howard E. McMinn. This publication of the Santa Barbara Botanic Garden covers all the species of the genus, with their use in horticulture.

A Manual of the Flowering Plants of California by Willis Lynn Jepson.

Flowering Shrubs of California and Their Value to the Garden, by Lester Rowntree.

The Flowering Plants and Ferns of Mount Diablo, California, by Mary L. Bowerman.

Manual of the Flowering Plants and Ferns of Marin County, California, by John Thomas Howell.

A Flora of California, by Willis Lynn Jepson.

Illustrated Flora of the Pacific States, by Leroy Abrams.

Sunset's Western Garden Book. This fine book has an excellent chapter on California natives. Native Plants for California Gardens, by Lee W. Lenz describes many species with information on landscape use and culture.

Guide to the Plant Species of the Regional Parks Botanic Garden compiled by James B. Roof.

Descriptions are given of all plants in the Botanic Garden.

A California Flora by Philip A. Munz. Newly published and comprehensive.
